PHOTOGRAPHIC INTELLIGENCE REPORT

CONSTRUCTION STATUS OF SOVIET SILO ICBM SITES,
USSR

CIA/PIR-1019/65

WARNING

This document contains classified information affecting the national security of the United States within the meaning of the espionage laws U. S. Code Title 18, Sections 793 and 794. The law prohibits its transmission or the revelation of its contents in any manner to an unauthorized person, as well as its use in any manner prejudicial to the safety or interest of the United States or for the benefit of any foreign government to the detriment of the United States. It is to be seen only by personnel especially indoctrinated and authorized to receive [redacted] information. Its security must be maintained in accordance with [redacted] regulations.

CIA/PIR-1019/65

CONSTRUCTION STATUS OF SOVIET SILO ICBM SITES,

USSR

25X1 All Type III-C and Type III-D ICBM Sites in the USSR which were covered by [] were reviewed to determine their current construction status. Results are shown on Figures 1 through 16.

25X1 Fair to good quality [] coverage over Olovyannaya and Drovyanaya now indicates that the covers seen over various Type III-D silos on [] were environmental, probably put on during the last stages of back filling, and left on until the completion of the level access road. Installation of the silo door itself now appears to be the last step in completion of the site. Accordingly, definitions of Stages 7 and 9 (for Type III-D Sites) are modified as follows:

Stage 7 - Back filling complete around silo and road pattern well defined. Probable environmental cover often visible over silo.

Stage 9 - Road pattern complete. Installation of silo door and surfacing of road.

Stage 10 - Site complete

It is also apparent that the deployed Type III-D sites will vary from a probable minimum of 12 months to as much as possibly 16 months for completion, with 14 months being presently regarded as the best average figure for estimating purposes.
